

Prevention Program Outcomes Report

THE QUESTION

Did the community prevention program reach its participation and outcome targets across sites, and where should the next cycle of support go?

METHOD

Program measures compared before and after implementation across three sites. Observed change is reported separately from causal claims; where outcomes fall within the margin of uncertainty, the report says so directly.

RESULTS — SYNTHETIC DATA

SITE	PARTICIPANTS	BASELINE	FOLLOW-UP	CHANGE
Site A	120	42%	58%	+16 pts
Site B	95	38%	51%	+13 pts
Site C	74	45%	49%	+4 pts

FINDING

Participation met targets at two of three sites. The follow-up gain at Site C falls within the margin of uncertainty, so the report flags it as unconfirmed rather than presenting it as success.

WHAT YOU RECEIVE

A 4-6 page funder-ready outcomes report: program narrative, measures table, plain-language findings, and recommended next questions.
