

One-Page Data Brief

Wilex Roger — Public Health & Education Data Consulting

THE QUESTION

How did chronic absenteeism change across grade bands this school year, and which student groups need support first?

METHOD

Administrative attendance records for one illustrative school year, grouped by grade band. Absenteeism is flagged as chronic at 10%+ of enrolled days. Figures below are sample values for layout only.

KEY FIGURES

FINDING

Absenteeism rises steeply in the upper grades: high-school students are twice as likely to be chronically absent as elementary students. The pattern argues for grade-targeted outreach before attendance becomes habitual.

RECOMMENDED NEXT STEP

A 20-minute diagnostic session to review your own attendance data and agree where to look first.
